

Are you looking to be part of a team that creates first-class websites?

Beam & Hinge, a South Carolina-based web development firm, is seeking a self-motivated, hard-working, and team-oriented individual to serve as an **Interactive Designer**.

Founded in 2014, Beam & Hinge has quickly become a leading custom website design and development firm. Our team creates high design, brand-centric, and objective driven WordPress based websites for a diverse set of clients. We are a client focused firm that believes in attention to detail and the delivery of the highest quality product each and every time.

Our work is creative, fast-paced, and deadline oriented. If you are looking to be part of a growing team that works hard, celebrates successes, and looks to create the best client experience, please reach out to talk@beamandhinge.com.

Who are we looking for?

A collaborative, passionate and detail-oriented designer with a strong aesthetic and a keen strategic mind to join our team as an **Interactive Designer**.

- The work moves fast, so organization and excellent time-management skills are a must.
- Our quality standards are high, keeping with which requires strong attention to detail as well as the ability to stay focused on clients' long-term strategic goals.
- Interest in and knowledge of the web, web-related technologies, and digital marketing principles are a plus.
- Even more important than relevant knowledge, is the desire to learn and continuously improve.
- Experience Requirements: 5+ years of professional experience, including designing digital UI, software/application design (mobile/web/devices), presentation and storytelling; demonstrated experience successfully working with a multi-disciplinary design team

What will you do?

An **Interactive Designer's** day-to-day responsibilities include:

- Develop design solutions across multiple media including digital and print.
- Lead the preparation of design deliverables by shaping the creative direction into design solutions and specific tasks.
- Confidently articulate how the design solution answers user needs, business goals, technical constraints, and other project facets.
- Producing high-quality, innovative design solutions.
